

MidAmerican Energy makes the following comments concerning WT Docket No. 02-55

1.The proceeding is slanted toward Nextel and Public Safety with no regard to the needs and requirements of Energy Utilities critical infrastructure.

2.The interference problems that the proceeding is trying to address could be better resolved through technical solutions available.

3.The rulemaking in its present form puts any MidAmerican's future plans to implement a private radio system using iDEN technology at risk.

4.MidAmerican fully supports the UTC position on this proposed rulemaking.
